Maintain Plus

Apptimized Maintain gives enterprises the earliest possible warning of when a Windows Update is going to cause an application issue. Always be ready to deploy the latest Windows Update

Apptimized Maintain takes the hassle away from testing and maintaining large application estates against the ever changing backdrop of Windows Updates.

Built in partnership with Microsoft, Apptimized Maintain is the only service that has access to the Microsoft Windows Insider Release process.

As Microsoft release a Preview of the next Windows Update, Apptimized Maintain will automatically test your applications against the Update, and tell you where there are potential issues so you can remediate well in advance of when the Update goes into production, leading to a smooth and rapid rollout.

How does it work? Send us your packaged apps and our proprietary Apptimized Echo technology will 'record' all the information needed to understand your application's behavior so that it can be automatically retested – to your requirements - every time Microsoft update Windows.

Once you've remediated any issues, you can roll out the latest Windows Update quickly and confidently as soon the Release is production-ready.

Apptimized Maintain is delivered using the industry's first and only fully cloud-based solution. Rapid implementation and no need to stand up any hardware or software.

Key Benefits

- ✓ Zero risk monthly fixed cost subscription model – USD\$25 / app / month
- ✓ Fully cloud-based. No need for hardware, software or specialist resource
- ✓ Integrated with Microsoft Windows development team
- ✓ Fully customizable and configurable
- ✓ Always be ready to deploy the latest Windows Update
- ✓ Rapid implementation
- ✓ On MS Azure
- ✓ Fully automated testing using Apptimized Echo
- ✓ All formats and platforms supported

How Does Apptimized Maintain Work?

Step One...Send us your packaged applications estate in whatever format is easier for you. We will load them into Apptimized for you and automatically 'record' the installs. If you require us to configure the Windows build to meet your needs, we'll do this now.

Step Two...We will create install instructions from your packages for you to review to make sure that subsequent testing meets your business requirements. If you want to add functional testing, this is where we'll gather that and make sure it's included.

Step Three...Using the Apptimized "Echo" technology, we'll automatically test your estate against your individually configured build to create the baseline. All results will be recorded for reuse.

Step Four...Every time Microsoft issue a new Windows Update – including 'Patch Tuesdays' – we'll implement it in your individually configured build, and automatically test all your applications, letting you know where you have potential issues. Because we're testing against Insider Builds, you'll get the earliest possible warning.

About Apptimized

We are a specialist provider of application packaging and testing services. Established in 2003 and head-quartered in Potsdam, Germany, we have offices in the UK, US, Denmark, the Ukraine and Vietnam as well as an extensive network of partners throughout the world. Customers include many of the world's largest businesses including the likes of PwC, UBS, Coca-Cola, AXA and Rolls Royce.
